Update on JSNA developments

The Health and Wellbeing Board reviewed the JSNA at their last meeting and gave support to the continuing developments in presentation and content. They gave overall support for the continuation of an online JSNA, which embedded key reports and web-links to give the widest access to information on a broad range of issues. Some of the new developments supported were:

An evaluation of the JSNA Briefing Sessions:

The JSNA Manager was asked to undertake an evaluation of these information giving sessions. They have been generally well received but it is felt that the style and format may need some revising to optimise them. An online survey is underway for those who have attended one and the results and any agreed changes will be published in the Briefing Session section on the front page of the JSNA.

Improving ownership of JSNA pages and information:

A Housing Information Sub-group has been set up and is starting to take ownership of sections in the Housing Needs section of the JSNA. These are developing pages and so far it has focused on District Councils information, but it is expected that this will be rolled out more widely going forward (see draft Housing page: www.norfolkinsight.org.uk/jsna/housing).

Other issues:

The JSNA Working Group is continuing to support and advise on developments including on the recently completed Public Summary report (mentioned on second page). All the developments and related information can be found in the Reports and Activities section of the JSNA front page (www.norfolkinsight.org.uk/jsna).

The full presentation of issues to the Health and Wellbeing Board in July 2014 can be accessed from this part of the JSNA pages.

Health Profiles Update

Health profiles for the County and District areas have been produced for several years now, and the 2014 versions have now been published by Public Health England. There have been a few changes to the content and style this year, and there is now an interactive version of the profile.

Health Profiles provide summary health information to support local authority members, officers and community partners to lead for health improvement.

Living in Norfolk with Dementia: A Health and Wellbeing Needs Assessment 2014

[An estimated 16,400 people in Norfolk have dementia (either diagnosed or undiagnosed)]

The Public Health team at Norfolk County Council has recently completed a Dementia Health and Wellbeing Needs Assessment for Norfolk, working with key stakeholders in the county.

The report describes the needs of people with dementia and their carers in Norfolk and makes recommendations to further improve services.

The aim is to systematically review the health issues facing individuals with dementia and their wider social network, leading to actions that will improve diagnosis and care for individuals with dementia and their carers. It is aimed at commissioners, providers, voluntary organisations, strategic bodies, people with dementia and their carers.

The report has been produced by reviewing data; evaluating research, strategies, national documents and examples from other areas; and speaking to people with dementia, carers and professionals, in addition to visiting a number of different organisations along the dementia pathway.

Over the past 10 years in Norfolk, dementia has come a long way but there is still much to be done. The momentum that has been built from the many achievements to date now needs concrete progress as Norfolk strives to become a Dementia Friendly county.

KEY FACTS:

- ❖ An estimated 16,400 people in Norfolk have dementia (either diagnosed or undiagnosed). Equivalent to 1 in every 53 people in Norfolk, or the populations of Cromer, Hunstanton and Holt combined.
- ❖ Great Yarmouth and Waveney Clinical Commissioning Group (CCG) has the highest number of people with dementia, reflecting its larger population.
- ❖ North Norfolk CCG has the highest proportion of people with dementia.
- ❖ There are about 26 new cases of dementia per year per 1,000 population of over 65s in Norfolk (diagnosed or undiagnosed). That is equivalent to about 78 new people getting dementia in Wymondham per year.
- ❖ The incidence of dementia increases as age increases, but is not a natural part of ageing.
- ❖ Just over half of people with dementia have mild dementia and the remainder have moderate or severe disease.
- ❖ About two thirds of people with dementia live in the community compared to long term care.
- ❖ Over the next 20 years there will be an estimated additional 9,000 people with dementia in Norfolk. That is equivalent to the whole population of Downham Market. The greatest growth will be in people aged over 90 years.

Summary >>>

JSNA Public Summary Report

A summary report aimed at making the information clearer and more accessible has been produced and published on the JSNA. This uses infographics (picture and images rather than graphs) to show key information about the health and wellbeing of people in Norfolk.

The report is presented as a total report or in a format that allows you to extract individual images for use elsewhere. Both version provide the source and date of the figures used.
